

# PlaySpot

Hyper-local sports ground booking & player matching platform — Hyderabad

PlaySpot is a hyper-local mobile application designed to address a persistent friction point in recreational sports participation across Hyderabad: the inability to quickly locate available sports facilities and assemble enough players for a game. The platform integrates real-time ground availability, instant slot booking, and a peer-to-peer player matching system into a single, unified experience — reducing the average pre-game coordination time from over an hour to under five minutes.

PROBLEM

Students and working professionals spend over an hour calling grounds and messaging friends just to secure a single game slot — with no guarantee of a venue or enough players.

SOLUTION

A two-sided marketplace connecting players with verified ground owners, augmented by a live player-matching feed that lets users post and fill team vacancies in real time.

KEY DIFFERENTIATORS

Hyper-local

Exclusively Hyderabad-focused with on-ground verified listings, unlike national platforms where availability data is stale.

Dual-problem

Simultaneously solves venue discovery and team formation — existing competitors address only one side of the equation.

Multi-sport

Supports cricket, football, and badminton — the three highest-participation recreational sports in the target geography.

REVENUE MODEL

|                                              |                                                 |                                                        |
